DETAILED ACTION

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Applicants are asked to elect a specific species from each grouping below.

A) Whether polyethylene glycol (PEG) is used to remove polymeric proteins or PEG is used to remove protein aggregates and viruses, as stated in claims 1 and 11.

B) Whether polymeric proteins or protein aggregates are removed from the starting solution, as stated in claims 1 and 11.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 1648

A) Claims 1 and 11 require a specific use of PEG, all other claims are generic.

B) Claims 1 and 11 require a specific form of proteins to be removed, all other claims are generic.

The following claim(s) are generic: all claims are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: the different components being removed by PEG application (i.e., polymeric proteins vs. protein aggregates/viruses); and the different protein compositions being removed from the starting solution lack a corresponding special technical feature.
